GitHub: github.com/dananglin

SUMMARY

I have over four years of professional experience in DevOps and Platform Automation. My experience ranges from provisioning VMs and automating software installation using Ansible and Puppet to provisioning new Kubernetes environments using GitOps and creating Operators for the auto-provisioning and maintenance of PostgreSQL clusters on Kubernetes. Throughout my time with Ocado Technology I have developed an interest in the Go programming language and I would like to continue increasing my knowledge and experience in Go and use it more professionally. I'm also keen on developing my knowledge on the automation, monitoring and self healing of virtual platforms. As my career advances, I aspire to use my knowledge and skills to become a respected Senior Engineer with a background in platform automation.

SKILLS SUMMARY

Programming Languages	Go, Bash, Python
Cloud Hosting	AWS, Openstack, UKCloud
Containerisation	Docker, Kubernetes, LXD
Continuous Integration	Git, GitLab, Gitea, GitLab CI, Drone, Nexus, Jenkins
Monitoring and Alerting	Prometheus, Alertmanager, Grafana
Other Tools, Services or Frameworks	GNU/Linux, Elasticsearch, Logstash, Fluentd, Kibana, Ansible, Puppet, OpenAPI v3, PostgreSQL, HAProxy, Kanban, Scrum, JIRA

EXPERIENCE

Ocado Technology, Hatfield, Hertfordshire — *Platform Automation Engineer*

January, 2017 - Present

- I've supported development tools such as GitLab and Nexus hosted in AWS by performing various upgrade and maintenance tasks via CloudFormation and Puppet.
- I've used CloudFormation to provision a monitoring stack for GitLab. The monitoring stack consisted of Prometheus, Alertmanager and Grafana.
- I've deployed new SIT Kubernetes environments on Openstack using GitOps.
- I've automated Elasticsearch maintenance by creating and deploying maintenance apps on Kubernetes and scheduling them using CronJob objects.
- I've created and deployed a Postgres Operator using the Metacontroller for creating and managing Patroni Postgres clusters onto Kubernetes.
- I've deployed Prometheus, Alertmanager and Grafana on Kubernetes for monitoring database services including Postgres, Cassandra and Elasticsearch.
- I'm currently part of the monitoring and alerting work group for the Infrastructure department.

QA Consulting (Contracted to CACI), London — *DevOps Consultant*

March, 2015 - November, 2016

- I've built and supported production infrastructure hosted in UKCloud (for public sector projects) and AWS (for commercial projects).
- My general tasks included creating Ansible playbooks for network configuration, hardening of RedHat/CentOS VMs and for software installation and configuration.
- I've set up resilient and fault-tolerant infrastructure using tools such as HAProxy and Keepalive.
- I've built a cross-domain protective monitoring solution using the Elastic stack with Redis.

- I've installed and configured Nagios/Icinga for infrastructure monitoring.
- I was involved in setting up the production Docker environment for a government website.

QA Consulting (Contracted to IBM), Home Office, London — *DevOps Consultant*

October, 2014 - March, 2015

- I've built and supported new development, CIT and SIT environments for new projects at the Home Office.
- These environments were built on UKCloud using Jenkins and UKCloud's REST API.
- Linux (RedHat/CentOS) virtual machines were provisioned and hardenend using Puppet and Jenkins.
- I've learnt how to work in an Agile environment with Scrum; using JIRA for keeping track of my sprint tasks.
- I've used Confluence it to create documentation for new starters in the DevOps space.

QA Consulting, Worthing — *Trainee DevOps Consultant*

September, 2014 - October, 2014

- I've spent eight weeks in training to become a DevOps Consultant on behalf of QA Consulting.
- I've completed a two week intensive training course on business analysis. Trainig course covered client engagement, businnes process modelling, use case modelling and process and evaluation improvements.
- I then completed a six week hands-on training course on the fundamentals of DevOps and Continuous Integration.
- The DevOps training course consisted of learning about various software such as Puppet, Jenkins, Nexus, Maven, Git, Tomcat and the Atlassian tools.
- The training also included using Vagrant and Puppet to automate the provisioning of small CI and development environments for the continuous delivery of internal Java projects.

School of Systems Engineering, University of Reading, Reading — *Undergraduate Researcher*

July, 2012 - September, 2012

- This was a summer internship where I helped developed an interactive Java application that processes Terahertz signals in order to reveal hidden details behind walls.
- This was aimed at those who were not specialised in Terahertz signals to use an application to aid in their research in archaeology.
- The hidden details were captured in images or videos that could be viewed in a 2D or a 3D virtual environment.
- During this internship I learnt new techniques for processing Terahertz signals.
- I was able to use sample Terahertz data to reveal and display hidden details within a 3D virtual environment.

EDUCATION

University of Reading, Reading — *MEng (Hons) in Robotics, 2:1*

October, 2009 - July, 2013

St Angela's & St Bonaventure's Sixth Form College, London — *A-Levels in Maths, Physics and Product Design*

September, 2007 - July, 2009

HOBBIES AND INTERESTS

I enjoy walking/hiking. I have enjoyed small hikes around London, between different towns and villages of Hertfordshire and also along the south coast. Ingress (an augmented reality and location-based game) has helped me to discover hidden gems of London and Hertfordshire including Ellenbrook Fields in Hatfield and a hidden rail trail within Welwyn Garden City. I'm currently studying Japanese using textbooks to cover the fundamentals and podcasts and radio stations for immersion. I'm aiming to start taking the JLPT starting from N5 in July next year. I mainly keep up-to-date with tech news using news aggregation sites such as Reddit and Hacker News.
